FINANCIAL INVESTIGATION REPORT

Prepared by:

Survey Corps — Investigation Engine

Case reference: run_20260704_090710

Generated: 04 July 2026, 09:09

This report presents investigative leads based on transaction pattern analysis. It does not establish guilt — all findings should be independently verified before action.

Case Narrative

In brief, for the investigating officer:

- A total of Rs 11,220,500.47 was moved across the accounts in this case, with Rs 3,646,118.15 coming from outside the suspect network.
- MAMTA DESAI, account number 77849479467322, sent out Rs 2,572,222.33, making it the largest source of funds.
- MAMTA DESAI, account number 77849479467322, sent money to 655 different accounts.
- SAURABH MISHRA, account number 4580064736, received money from 129 different accounts.

- 6 Final Summary

1 • Case Reconstruction

The case contains 3 account cluster(s), with 0 account(s) ranked for suspicious activity. The highest-priority cluster is cluster_003 with total score 0.00.

3

CLUSTERS

2

CONNECTED CLUSTERS

1

ISOLATED CLUSTERS

cluster_001 • 1 account(s), 767 edge(s)

Highest-priority account: acct_003 • Cluster score 0.0

cluster_001 contains 1 connected account(s) and 767 transaction edge(s). The cluster evidence includes no scored pattern.

Members: acct_003

cluster_002 · 2 account(s), 619 edge(s)

Highest-priority account: acct_002 · Cluster score 0.0

The data shows two connected bank accounts, acct_001 and acct_002, with a total of 619 transactions between them. These accounts share UPI identifiers, as indicated by pattern ID 16. The evidence group contains two transaction IDs, one from each account. The accounts are part of a cluster with a total score of 0.0.

Members: acct_001, acct_002

Accounts with no established connections in this case

cluster_003

Account acct_004 was evaluated as an isolated account with no established transactional link to other accounts in this case. It was associated with failed_reversed_transaction_detection.

acct_004

2 · Input Summary

This report is based on **4** uploaded statement file(s) covering **4** account(s) and **4,329** transactions, spanning 2024-12-01 to 2026-05-09.

Source Account ID	Account Number	Account Holder	Bank	IFSC
acct_001	4580064736	SAURABH MISHRA	KOTAK MAHINDRA BANK LTD	KKBK0862855
acct_002	51051343030311	BRIJESH NAIK	BANDHAN BANK LIMITED	BDBL0404923
acct_003	77849479467322	MAMTA DESAI	HDFC BANK LTD	HDFC0025287
acct_004	610050431188751	AKASH MEHTA	AXIS BANK LIMITED	UTIB0002052

3 · Analysis Summary

The engine ran 4 account(s) through the full deterministic detector suite and built a money-flow graph of 1,354 nodes and 2,273 transaction edges.

4 ACCOUNTS ANALYSED	4,329 TRANSACTIONS	52.5% COUNTERPARTIES RESOLVED
0 ACCOUNTS FLAGGED		

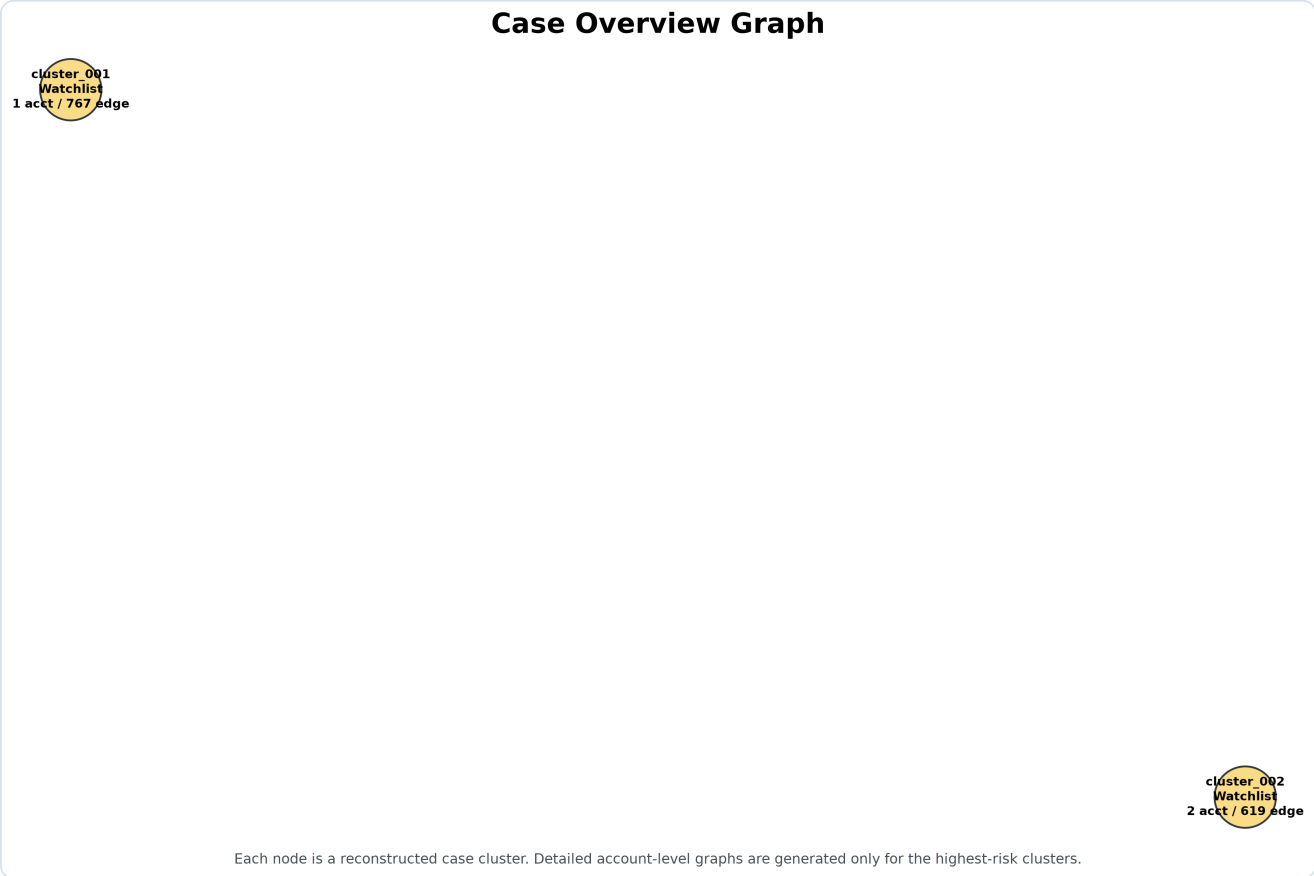

No balance inconsistencies detected in this dataset.

4 · Findings by Account

No accounts met the criteria for investigative flagging in this run.

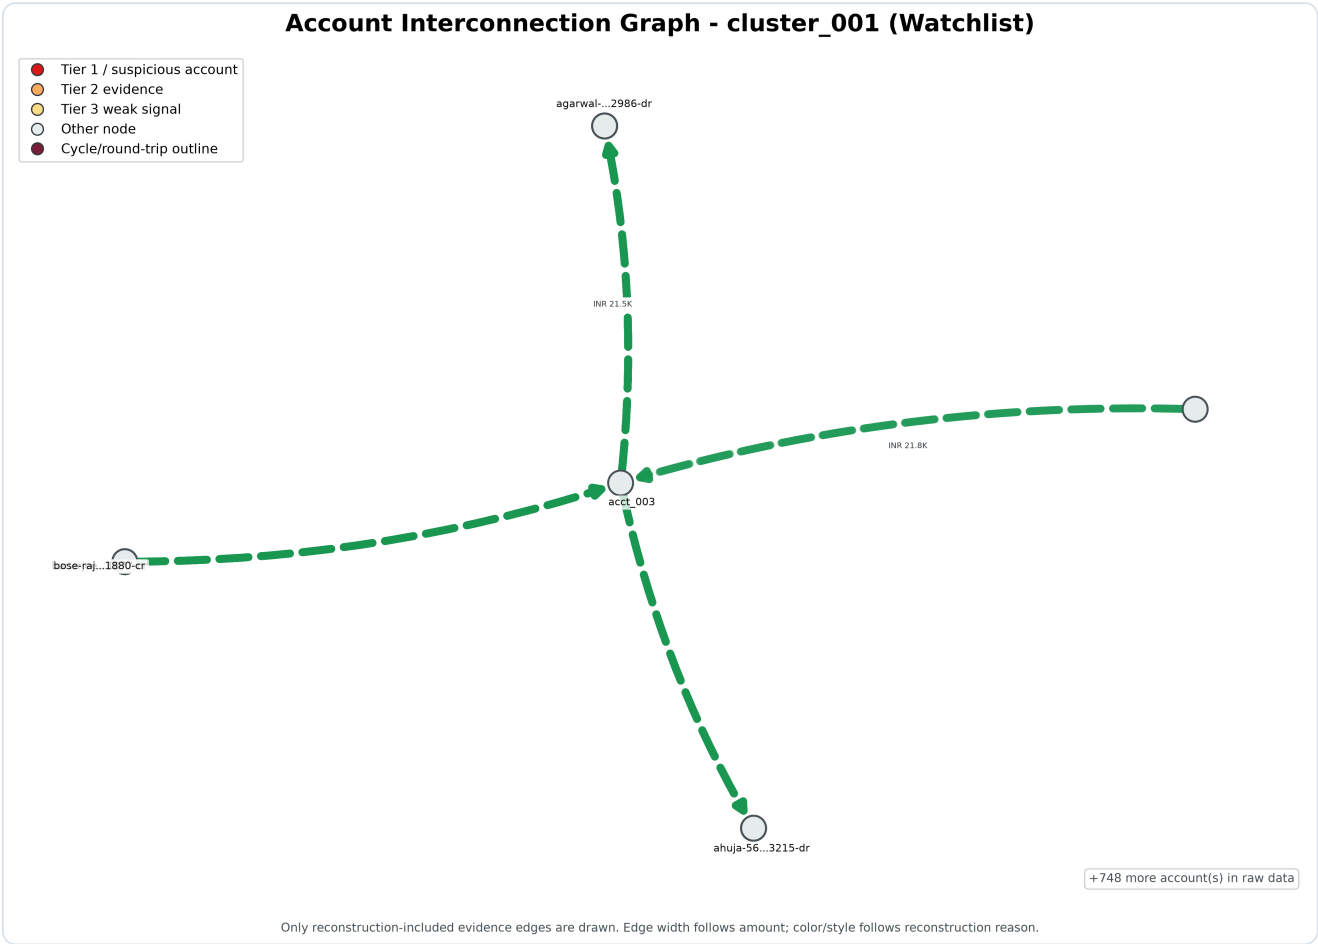

5 • Money-Flow Graphs

Case Overview Graph

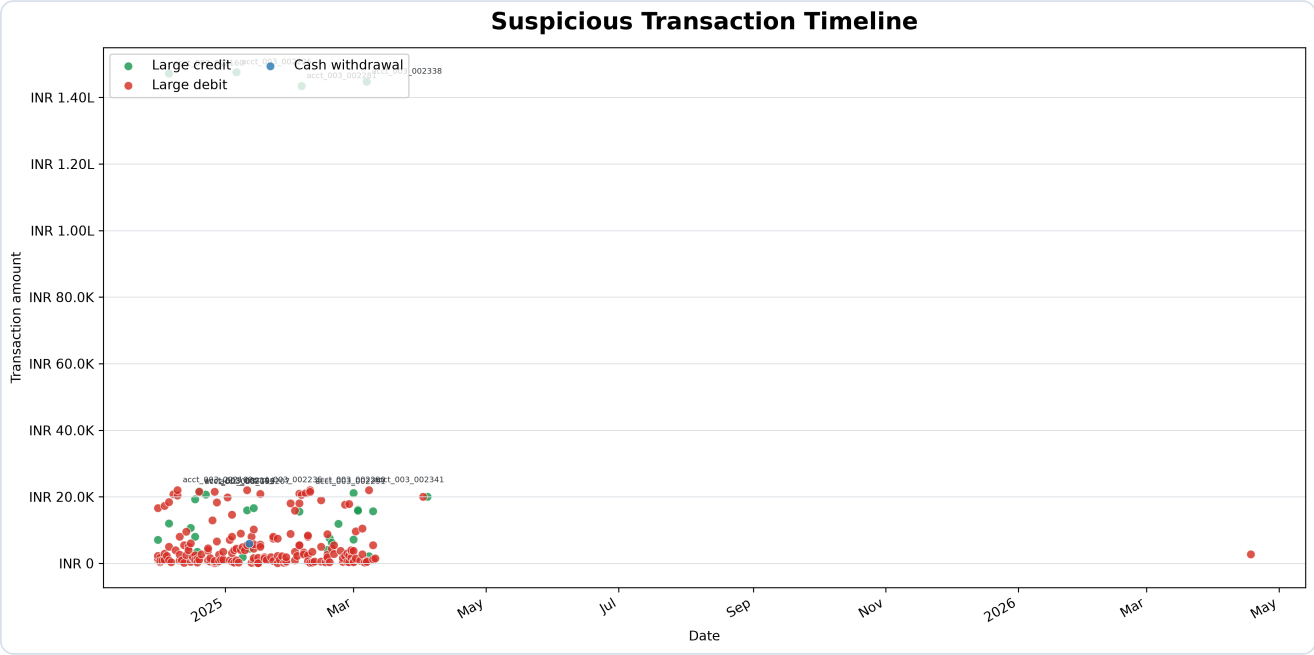

The graph shows a case-wide overview of 3 clusters, with the busiest pattern involving 2 accounts and 619 edges in cluster_002. The most notable figure is the high edge count in cluster_001 with 767 edges, despite having only 1 account. An investigator should take note of the significant activity in clusters_001 and _002, spanning a large number of transactions, to understand the money flow patterns.

Account Interconnection Graph

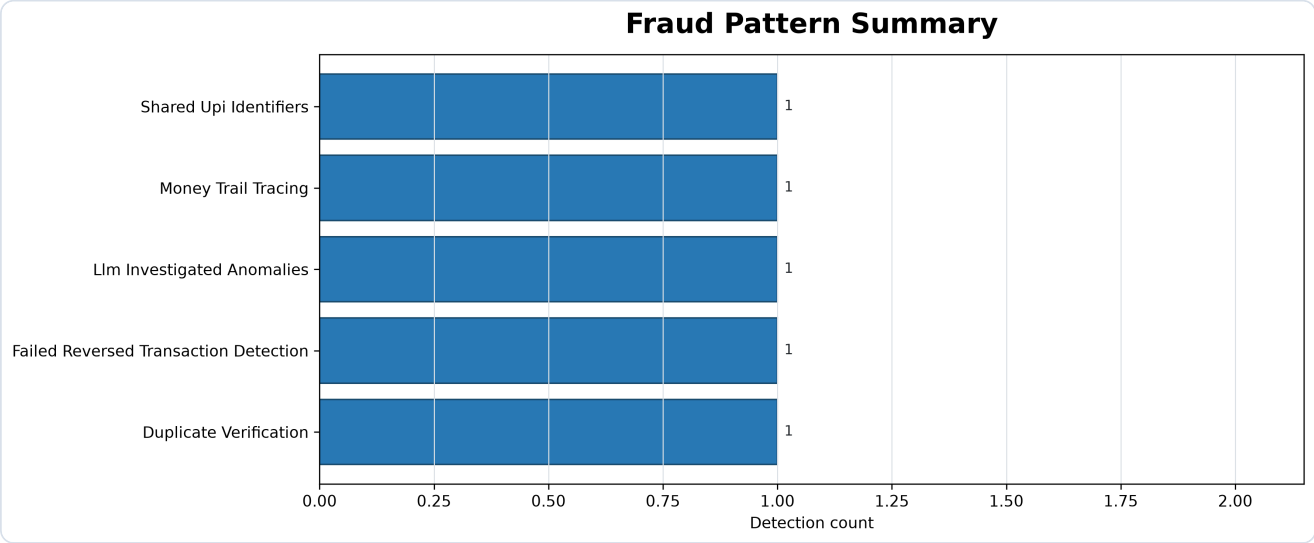

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2024-12-01 to 2026-05-09, covering a total of 4329 transactions. The most notable figure is the total number of transactions, which is 4329. An investigator should take note that no transactions were flagged and excluded, indicated by 0 flagged_excluded, and examine the entire timeline for patterns or anomalies.

Fraud-Pattern Summary

The graph shows 6 different patterns, with each pattern occurring 1 time, over an unspecified time span. The most notable figures are the occurrences of each pattern, all of which are equal at 1. An investigator should take from it that there is one instance of each pattern, including Duplicate Verification, Failed Reversed Transaction Detection, Money Flow Graph Construction, Money Trail Tracing, Shared Upi Identifiers, and Llm Investigated Anomalies.

6 • Final Summary

No accounts met the criteria for investigative flagging in this run.

Score legend

Score Range	What It Means
600+	Strong evidence across multiple independent pattern types — high investigative priority
300–599	Moderate evidence, worth follow-up but less urgent
Below 300	Weak or isolated signals, mostly for reference

Generated by the Survey Corps Investigation Engine for CIDECODE · Run run_20260704_090710 · 04 July 2026, 09:09. All findings are investigative leads requiring independent verification.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 7 · partial_failure
