## Case Overview Graph

The graph shows a case-wide overview of 3 clusters, with cluster\_003 having the highest total score of 2446.328 and cluster\_001 having the most edges with 929. An investigator should note the busiest pattern involves cluster\_001, and the time span is not explicitly stated but can be inferred to be relevant to the 929 edges and 556.0357 total score in cluster\_001.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

## Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2016-07-30 to 2026-01-04, covering a total of 2216 transactions. The most notable figure is the total number of transactions, which is 2216. An investigator should take note of the time span, nearly 10 years, and the fact that no transactions were flagged and excluded, indicating all 2216 transactions are under scrutiny.

## Fraud-Pattern Summary

The graph shows various fraud patterns, with the most notable being Duplicate Verification at 77 occurrences. The busiest pattern is Duplicate Verification, while other notable figures include Structuring Smurfing Detection at 17 and Money Trail Tracing at 16. An investigator should take note of these high-frequency patterns, particularly Duplicate Verification, to identify potential fraud. The data spans a range of patterns, with the least frequent being several patterns at 1 occurrence.

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
