Case Overview Graph

Case Overview Graph

Each node is a reconstructed case cluster. Detailed account-level graphs are generated only for the highest-risk clusters.

The graph shows 4 clusters with a total of 5 accounts and 1 edge, spanning pattern IDs 1, 2, 8, 14, and 15. The most notable figure is cluster_001, which has the highest total score of 354.5115. An investigator should take note of the strong edge components used to reconstruct these clusters, which may indicate significant money flow patterns over the observed time span.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 672 transactions over a time span from 2025-03-20 to 2025-07-18. An investigator should note the total number of transactions and the absence of flagged or excluded transactions. The graph covers approximately 4 months of activity, with no specific large transfers or patterns highlighted in the provided data.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 29 instances of Duplicate Verification. An investigator should take note of the relatively high occurrence of Duplicate Verification and the presence of other patterns such as Suspicious Account Ranking with 3 instances. The data spans various patterns including Money Trail Tracing with 5 instances and Round Value Debit Patterns with 3 instances. The time span and largest transfers are not explicitly stated in the provided data.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
