YASH DUBEY **STRONG**

Account Number 25078124219247 · DCB Bank · Score 5,437

Rank #1

The account YASH DUBEY (25078124219247) exhibits suspicious money behavior, characterized by a large credit of 400000.00 and subsequent tracing into 17 debits, as well as multiple structuring smurfing transactions totaling 570545.00. This pattern of transactions raises concerns about potential money laundering activities. The account's transactions demonstrate a high level of complexity and potential evasion tactics.

- **Money Trail Tracing** **STRONG** — A credit of 400000.00 was traced into 17 subsequent debits with no remaining untraced amount, indicating a potentially suspicious money trail. (+52 more of this type)
- **Structuring Smurfing Detection** **STRONG** — 79 credit transactions totaling 570545.00 were made on 2025-03-15, with each transaction below the individual cutoff, suggesting structuring smurfing activity.
- **Duplicate Verification** **WEAK** — Transactions ref:681310110010629 share an account, direction, near-equal amount, and nearby date, but were not flagged as duplicates, potentially indicating missed duplicate transactions. (+2 more of this type)
- **Money Flow Graph Construction** **STRUCTURAL** — A money-flow graph with 837 nodes and 2233 directed transaction edges was constructed, indicating a complex web of transactions that may be worthy of further investigation.
- **Round Value Debit Patterns** **WEAK** — 9 suspicious round-value debits totaling 277000.00 were made, with repeated amounts of 25,000, potentially indicating a pattern of high-value transactions designed to evade detection.

Each node is a reconstructed case cluster. Detailed account-level graphs are generated only for the highest-risk clusters.

The graph shows 4 clusters of accounts, with cluster_001 being the largest, containing 23 accounts and 2208 edges, and having a total score of 12478.5499. The most notable figure is cluster_001's total score and edge count, indicating a complex pattern of transactions. An investigator should focus on cluster_001, which has the highest total score and edge count, to understand the busiest patterns and largest transfers.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2016-07-30 to 2026-01-04, covering a total of 16973 transactions. The most notable figure is the large number of transactions, which is 16973. An investigator should take note of the time span, nearly 10 years, and the fact that no transactions were flagged and excluded, 0, to understand the scope of the suspicious activity.

Fraud-Pattern Summary

The graph shows various fraud patterns, with the most notable being Duplicate Verification at 400 occurrences. The busiest patterns also include Money Trail Tracing at 84 and Credit To Cash Out Chains at 35. An investigator should take note of these large figures, as well as smaller but potentially significant patterns like First Contact Large Transfer at 4 and Round Value Debit Patterns at 4, to identify potential fraud over the observed time span.

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
