- **Shared Upi Identifiers** **STRONG** — UPI identifier 'anita@ybl' appears across 3 different accounts, potentially indicating shared ownership or coordinated activity. (+1 more of this type)
- **Money Trail Tracing** **STRONG** — A credit of 55000.00 was traced into 9 subsequent debits, with the full amount allocated and no remaining untraced balance.
- **Low Value Account Testing** **STRONG** — The account exchanged 3 low-value transactions of 10.00 each with another account, consistent with account-testing behavior.
- **Duplicate Verification** **WEAK** — An extraction flagged a row as a duplicate, but an independent cross-check found no corroborating match. (+7 more of this type)
- **Credit To Cash Out Chains** **WEAK** — The account received a credit of 100000.00, followed by 17 ATM/cash withdrawals totaling 160049.56 within 3 days. (+7 more of this type)
- **Money Flow Graph Construction** **STRUCTURAL** — A money-flow graph was constructed with 665 nodes and 1239 directed transaction edges, indicating a complex transaction network.

Rank #9

This account is suspicious due to a large credit transaction of 300000.00 on 2025-05-02, which was fully allocated to 4 subsequent debit transactions. The money flow graph constructed with 665 nodes and 1239 directed transaction edges indicates potential unusual money flow patterns.

Case Overview Graph

The graph shows 5 clusters with the largest cluster, cluster_001, having 14 accounts, 1054 edges, and a total score of 5467.7109. Cluster_001 also has the most pattern IDs, including 1, 3, 8, 9, 13, 15, 16, and 19. An investigator should note the significant difference in edge count and total score between cluster_001 and the other clusters, particularly clusters 004 and 005 which have 0 edges. The busiest pattern appears to be associated with pattern IDs 1, 8, and 9, which are present in multiple clusters.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2016-07-30 to 2026-01-04, covering a total of 15040 transactions. The most notable figure is the large number of transactions, which is 15040. An investigator should take note of the long time span of approximately 9 years and the fact that 0 transactions were flagged and excluded.

Fraud-Pattern Summary

The graph shows various fraud patterns, with the most notable being Duplicate Verification, which occurs 326 times, and Money Trail Tracing, which occurs 54 times. The busiest patterns also include Credit To Cash Out Chains with 32 occurrences. An investigator should take note of these figures to identify potential fraud trends and areas for further investigation.

6 · Final Summary

9 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
