5 · Money-Flow Graphs

Case Overview Graph

The graph shows 5 clusters with the largest cluster, cluster_001, having 14 accounts and 1054 edges with a total score of 5467.7109. Cluster_001 also has the most pattern IDs, including 1, 3, 8, 9, 13, 15, 16, and 19. An investigator should note the significant difference in edge count and total score between cluster_001 and the other clusters, with cluster_002, cluster_003, cluster_004, and cluster_005 having 92, 70, 0, and 0 edges, and total scores of 858.06, 1880.1852, 392.2437, and 68.0, respectively.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2016-07-30 to 2026-01-04, covering a total of 15040 transactions. The most notable figure is the large number of transactions, which is 15040. Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
