5 · Money-Flow Graphs

Case Overview Graph

Insufficient connected transactions to render this graph for this run.

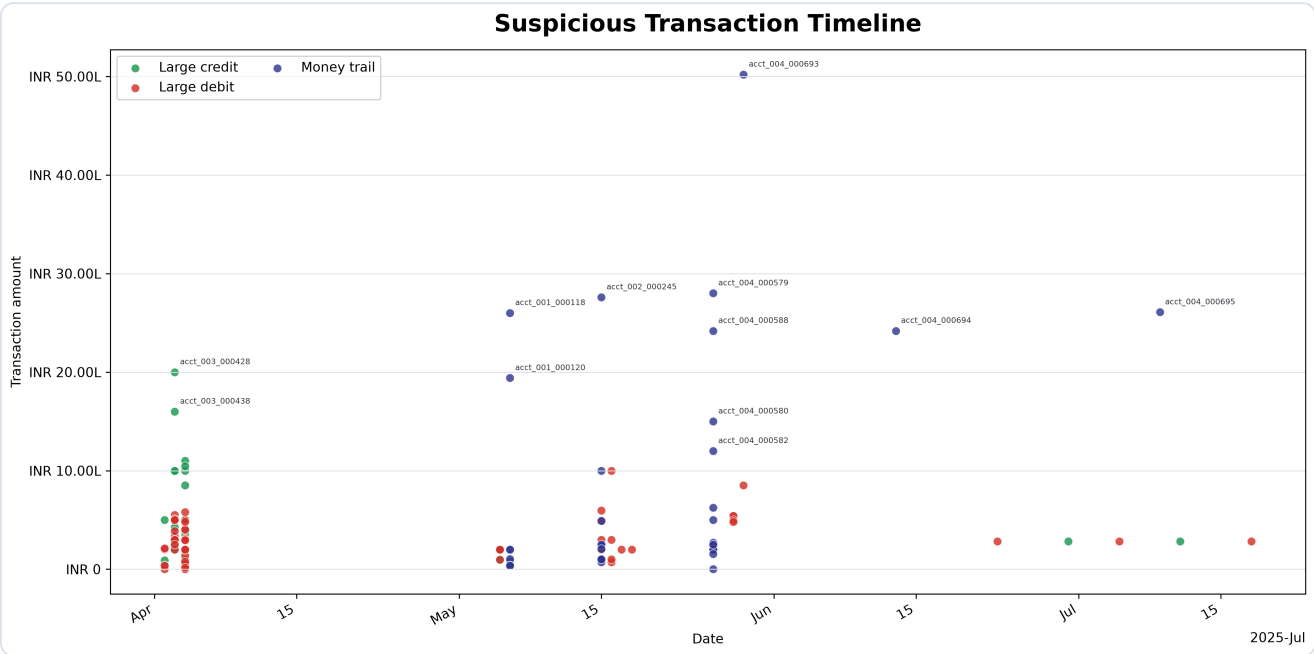

This exhibit summarizes reconstructed case clusters only: each node is a cluster with its risk level and account/edge counts, while detailed account links are shown separately for the highest-risk clusters.

Account Interconnection Graph

Insufficient connected transactions to render this graph for this run.

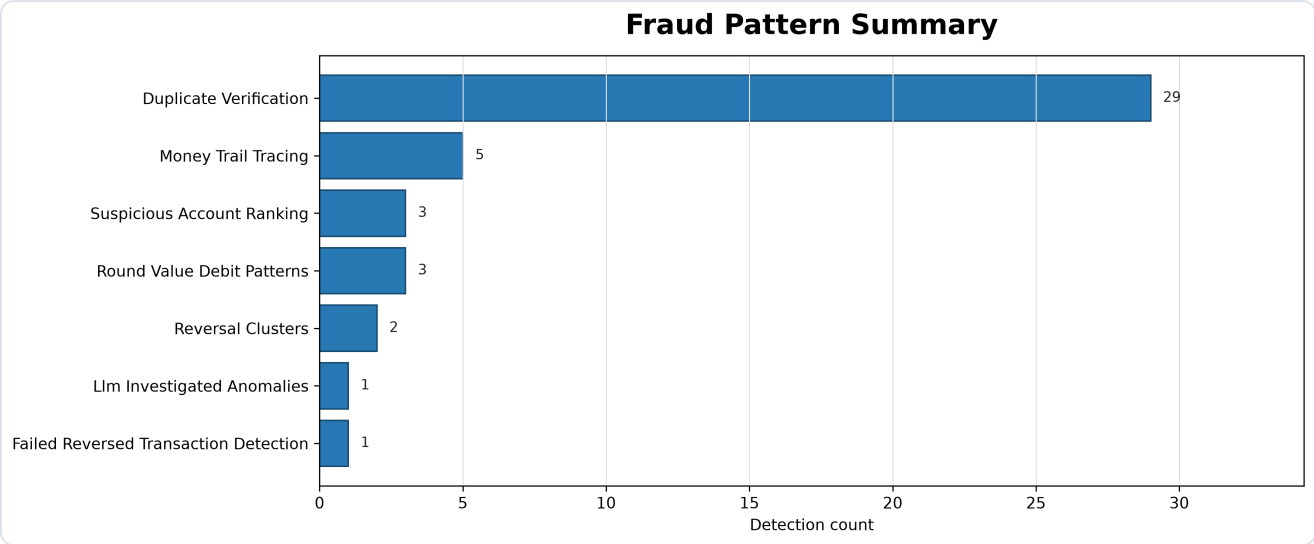

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 672 transactions over a period from 2025-03-20 to 2025-07-18. An investigator should note the total number of transactions and the time span of approximately 4 months. The absence of flagged or excluded transactions is also notable. This information can help an investigator understand the scope of the suspicious activity timeline.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 29 instances of Duplicate Verification. An investigator should take note of the relatively high occurrence of Duplicate Verification and the presence of other patterns such as Failed Reversed Transaction Detection and Reversal Clusters. The time span and busiest patterns are not explicitly stated in the provided data, but the data does indicate a variety of fraud patterns including Money Trail Tracing and Round Value Debit Patterns.

6 · Final Summary

3 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).

- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 15 · partial_failure
