5 · Money-Flow Graphs

Case Overview Graph

Insufficient connected transactions to render this graph for this run.

This exhibit summarizes reconstructed case clusters only: each node is a cluster with its risk level and account/edge counts, while detailed account links are shown separately for the highest-risk clusters.

Account Interconnection Graph

Insufficient connected transactions to render this graph for this run.

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 372 transactions over a period from 2025-04-16 to 2025-06-23, with no flagged transactions excluded from the analysis. The most notable figure is the total number of transactions, which is 372. An investigator should take note of the time span of approximately 68 days and the comprehensive nature of the data, as it includes all transactions without any exclusions.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with 16 instances of Duplicate Verification being the most notable figure. The busiest pattern is Duplicate Verification, occurring 16 times, while other patterns like Money Trail Tracing and Round Value Debit Patterns occur 3 and 2 times respectively. An investigator should take note of these figures to identify potential fraud trends.

6 · Final Summary

2 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
