### Case Overview Graph

#### Case Overview Graph

Each node is a reconstructed case cluster. Detailed account-level graphs are generated only for the highest-risk clusters.

The graph shows 3 clusters with a total of 4 accounts and 2 edges, spanning pattern IDs 1, 2, 8, 9, 14, and 15. The most notable cluster is cluster\_001 with a total score of 3248.3507. An investigator should take note of the significant difference in total scores between cluster\_001 and the other two clusters, with cluster\_002 having a total score of 392.2437 and cluster\_003 having a total score of 68.0.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

## Suspicious Activity Timeline

The graph shows 11013 transactions over a time span from 2024-09-11 to 2025-12-31. The most notable figure is the total number of transactions, which is 11013. An investigator should take note that no transactions were flagged and excluded, indicated by 0 flagged\_excluded, suggesting all 11013 transactions are under review.

## Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 38 instances of Money Trail Tracing. The busiest pattern is Money Trail Tracing, indicating a significant amount of potentially suspicious activity. An investigator should take note of the high frequency of Money Trail Tracing and the presence of other patterns such as Duplicate Verification and Failed Reversed Transaction Detection, which occurred 3 times each.

## 6 · Final Summary

3 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 25 · active
