5 • Money-Flow Graphs

Case Overview Graph

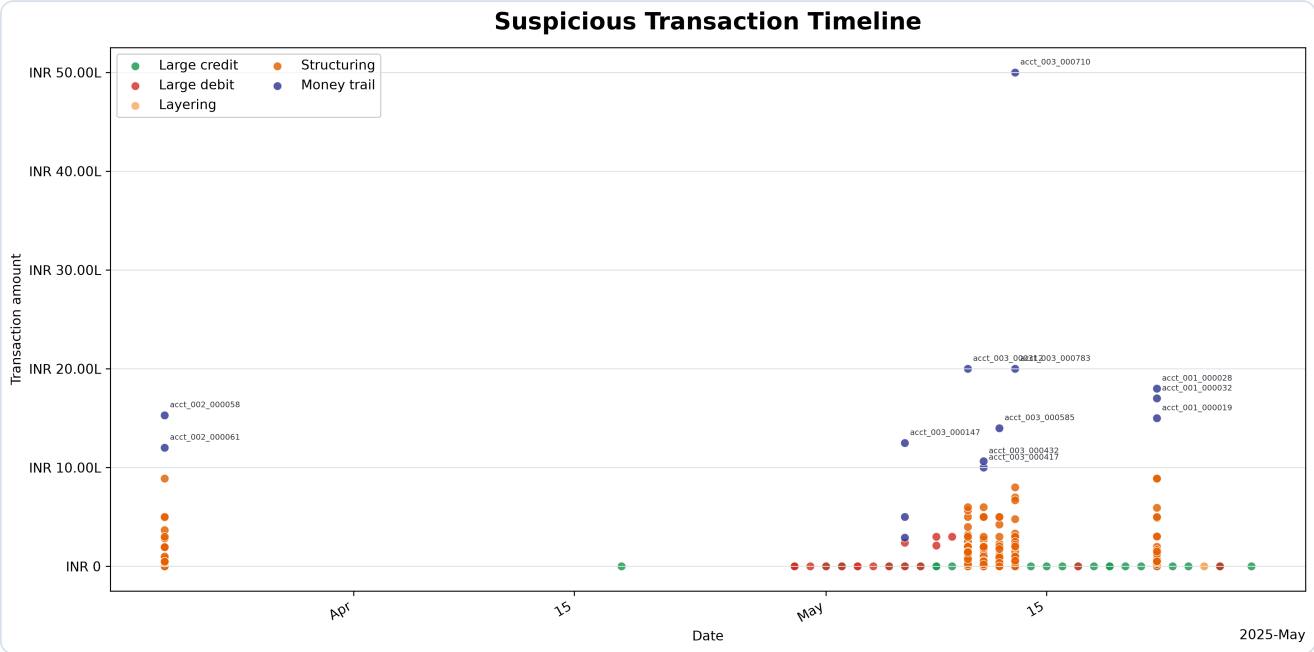

The graph shows 7 clusters with the largest total score of 1107.3087 in cluster_003, which also has the most diverse pattern IDs with 4 different IDs. Cluster_001 has the most accounts with 5 and the most edges with 237. An investigator should note the significant difference in total scores and edge counts across clusters, particularly the high total score in cluster_003 and the high edge count in cluster_001.

Account Interconnection Graph

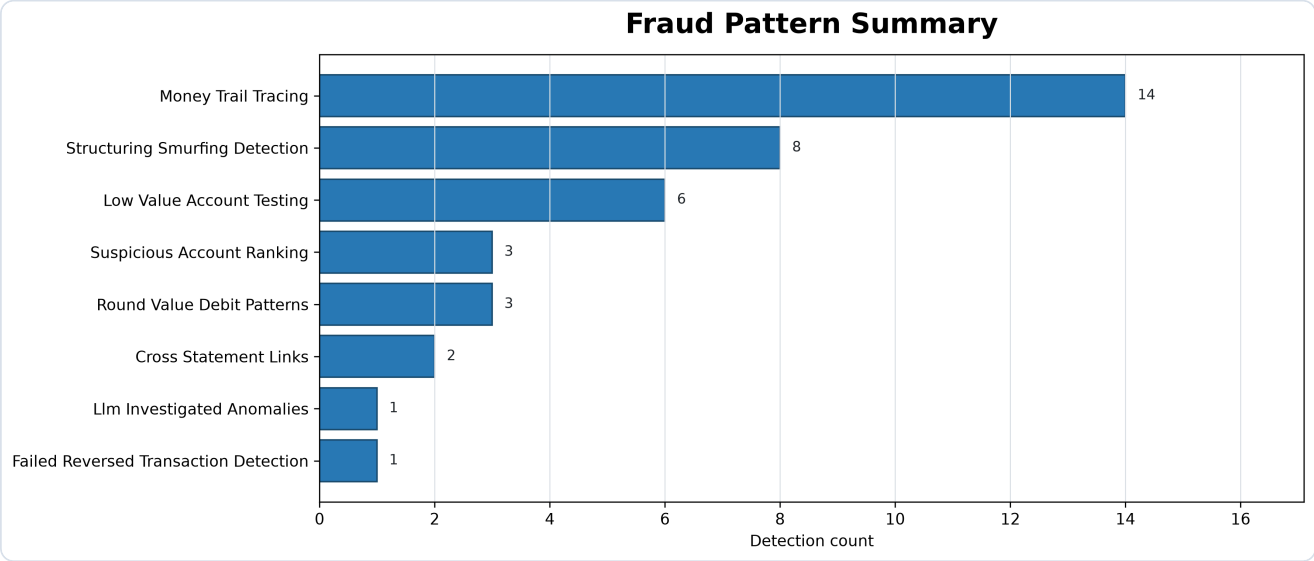

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 1396 transactions over a period from 2019-11-26 to 2025-10-03, with no transactions excluded. The most notable figure is the total number of transactions, which is 1396. An investigator should take note of the time span, approximately 5 years and 11 months, to understand the scope of the suspicious activity. The lack of excluded transactions suggests all 1396 transactions are under scrutiny.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 14 instances of Money Trail Tracing. The busiest pattern is Money Trail Tracing, while the largest transfer count is not explicitly stated in the provided data. An investigator should take note of the 8 instances of Structuring Smurfing Detection and the 6 instances of Low Value Account Testing, as these may indicate potential suspicious activity.

6 • Final Summary

5 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 16 · partial_failure
