Case Overview Graph

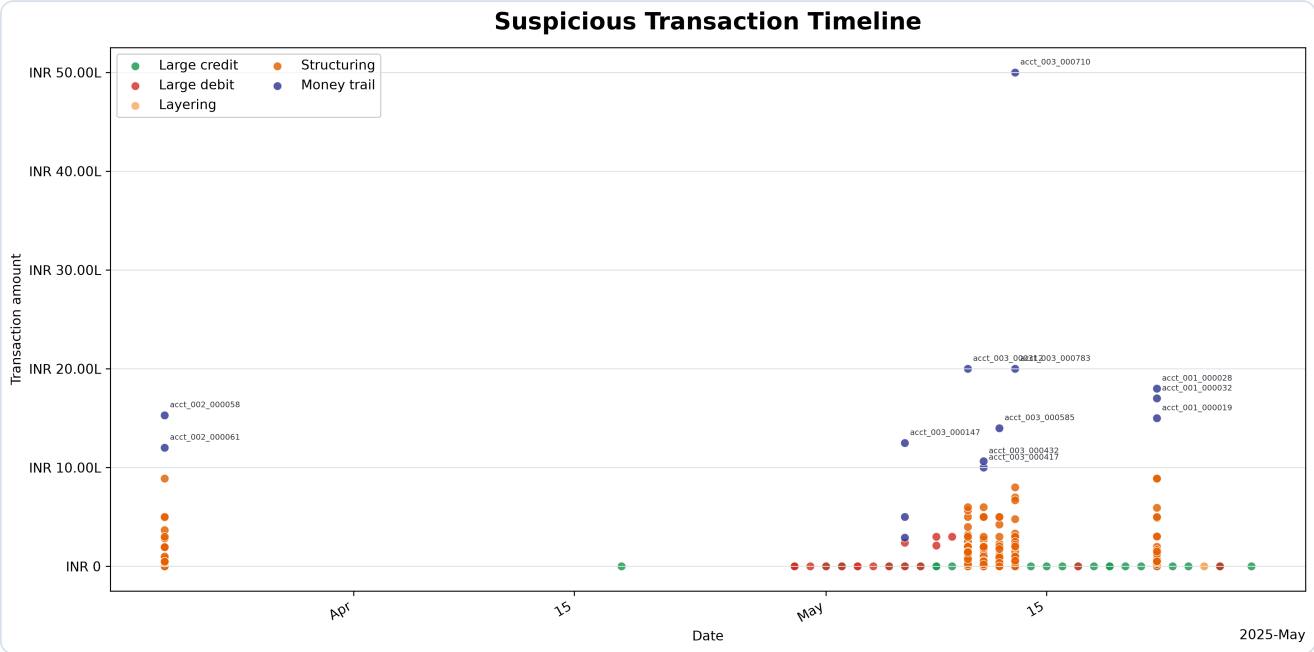

The graph shows 7 clusters with a total of 13 unique pattern IDs, the busiest cluster having 237 edges and the highest total score of 1107.3087 in cluster_003. An investigator should note the significant difference in edge counts and total scores among clusters, with cluster_001 and cluster_002 having 237 and 93 edges respectively. The most notable figure is the total score of 1107.3087 in cluster_003.

Account Interconnection Graph

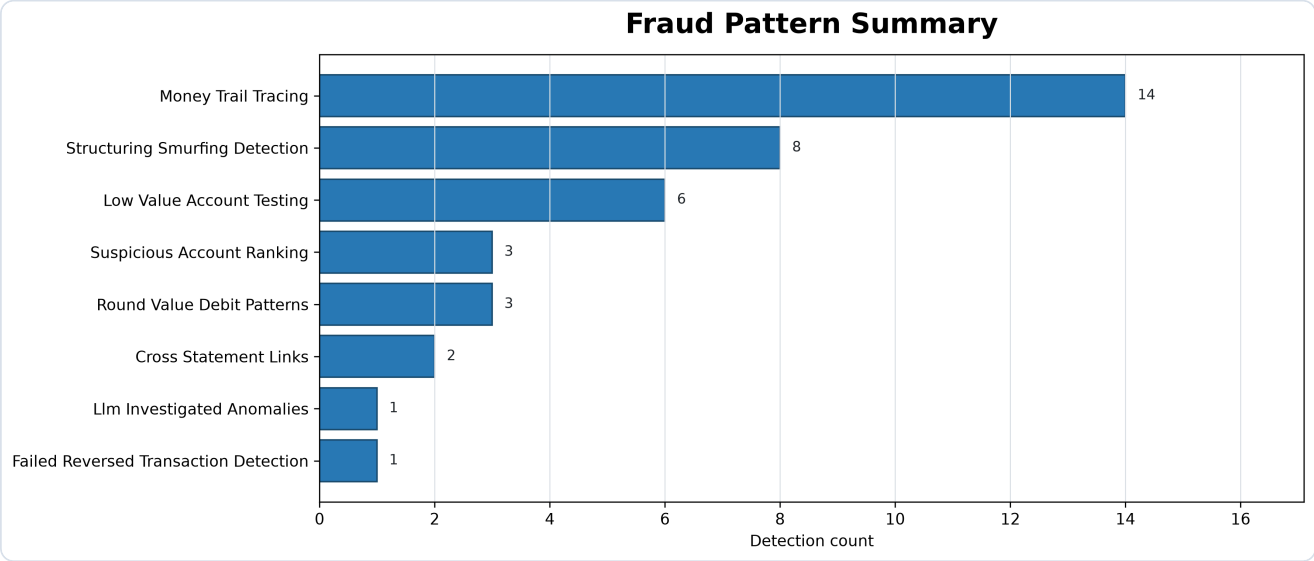

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2019-11-26 to 2025-10-03, covering a total of 1396 transactions. The most notable figure is the total number of transactions, which is 1396. An investigator should take note that no transactions were flagged and excluded, indicated by 0 flagged_excluded. This suggests a comprehensive view of all transactions over the nearly 6-year time span.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 14 instances of Money Trail Tracing. The busiest pattern is Money Trail Tracing, while other notable patterns include 8 instances of Structuring Smurfing Detection and 6 instances of Low Value Account Testing. An investigator should take from it that Money Trail Tracing is the most common pattern, occurring 14 times, and should prioritize this area for further investigation.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 15 · partial_failure
