An investigator should take note of the large total scores in clusters cluster_003, cluster_004, and cluster_005, with scores of 1218.0005, 813.3992, and 831.2352 respectively.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2019-11-26 to 2025-12-31, with a total of 12492 transactions, excluding 12 flagged transactions. The most notable figure is the large number of transactions over a nearly 6-year period. An investigator should take note of the sheer volume of transactions and the extended time span, which may indicate a complex and long-running scheme.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 35 instances of Money Trail Tracing, indicating a significant focus on tracing money flows. The busiest patterns also include 6 instances of Low Value Account Testing and Round Value Debit Patterns. An investigator should take note of these figures to understand the scope of potential fraudulent activities. The time span is not explicitly stated, but the data provides insight into the types of patterns detected.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 25 · partial_failure
