- **Money Flow Graph Construction** **STRUCTURAL** — A money-flow graph was constructed with 4 nodes and 0 directed transaction edges, which may indicate a lack of transparency in the account's transactions.
- **Reversal Clusters** **WEAK** — The account's transaction history shows a cluster of 3 debit-reversal pairs, which is unusual and warrants further investigation.

Assessment: 1 strong pattern type(s) and 2 distinct pattern(s) — weak evidence.

5 · Money-Flow Graphs

Case Overview Graph

Insufficient connected transactions to render this graph for this run.

This exhibit summarizes reconstructed case clusters only: each node is a cluster with its risk level and account/edge counts, while detailed account links are shown separately for the highest-risk clusters.

Account Interconnection Graph

Insufficient connected transactions to render this graph for this run.

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 672 transactions over a time span from 2025-03-20 to 2025-07-18. An investigator should note the total number of transactions and the absence of flagged or excluded transactions. The time span of approximately 4 months is notable for the volume of activity.

Fraud-Pattern Summary

The graph shows 16 total pattern counts over an unspecified time span, with the most notable figures being 5 Money Trail Tracing occurrences and 3 each of Round Value Debit Patterns and Suspicious Account Ranking. An investigator should take note of the 5 Money Trail Tracing instances as a potential indicator of fraudulent activity. The presence of 3 Round Value Debit Patterns and 3 Suspicious Account Ranking instances also warrants further investigation.

6 · Final Summary

3 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).

- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.

Language-model calls this run: 7 · partial_failure
