5 · Money-Flow Graphs

Case Overview Graph

Insufficient connected transactions to render this graph for this run.

This exhibit summarizes reconstructed case clusters only: each node is a cluster with its risk level and account/edge counts, while detailed account links are shown separately for the highest-risk clusters.

Account Interconnection Graph

Insufficient connected transactions to render this graph for this run.

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows 672 transactions over a period from 2025-03-20 to 2025-07-18. The most notable figure is the total number of transactions, which is 672. An investigator should take note that there are no flagged transactions excluded from the graph, indicated by 0 flagged_excluded.

Fraud-Pattern Summary

The graph shows a summary of fraud patterns with the most notable figure being 5 occurrences of Money Trail Tracing. The busiest pattern is Money Trail Tracing, while other notable patterns include Round Value Debit Patterns and Suspicious Account Ranking, each with 3 occurrences. An investigator should take note of these patterns to identify potential fraud. The time span is not explicitly stated in the data.

6 · Final Summary

3 account(s) were ranked by composite suspicion score. The highest-scoring accounts show the broadest, strongest pattern evidence and warrant priority review.

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.

- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
