Cluster_001 also has the most pattern IDs with 18 different patterns. An investigator should take note of cluster_001 due to its large size and high total score, indicating a potentially significant money flow pattern.

Account Interconnection Graph

This static exhibit is filtered for legibility: it shows the material account-to-account relationships and only the most evidential external counterparties, while the full-density network remains available in the UI graph data.

Suspicious Activity Timeline

The graph shows a timeline of suspicious activity from 2009-06-12 to 2026-02-01, covering 202700 transactions. Notably, 490 transactions were flagged and excluded. An investigator should take note of the large number of transactions over this time span, approximately 16 years, to identify potential patterns or anomalies.

Fraud-Pattern Summary

The graph shows various patterns of potentially fraudulent transactions, with the most notable figures including 5617 instances of Duplicate Verification and 1473 instances of Cross Statement Links. An investigator should take note of these large figures, as well as the 818 Shared Upi Identifiers and 433 Structuring Smurfing Detection instances. The data spans a range of patterns, from 1 instance of Money Flow Graph Construction to 5617 instances of Duplicate Verification. The busiest patterns appear to be related to verification and statement links, which an investigator should prioritize for further review.

Score legend

Score Range	What It Means
600+	Strong evidence across multiple independent pattern types — high investigative priority
300–599	Moderate evidence, worth follow-up but less urgent
Below 300	Weak or isolated signals, mostly for reference

Data Security & Method (Appendix)

What stays on this machine

- All fraud detection, scoring and ranking run on this machine (deterministic code).
- Raw bank statements and extracted transactions never leave the machine.
- The money-flow graph, clusters and suspicion scores are computed locally.

What is sent to an external service

- Only small, redacted text samples are sent to the language model to describe a statement's column layout when local parsing is insufficient.
- For images / scanned PDFs, the page pixels are sent to a vision model (the one unavoidable case).
- The language model only rewrites explanations into plain language; it never changes a number, account, or decision.
